DETAILED ACTION

This communication is in response to Applicant's response dated May 20, 2009. Upon further consideration, a restriction to one of the following groups is required:

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 7-11, drawn to a process for maintaining a shared physical connection to a remote resource despite receiving a disconnection request from the remote resource (see Claim 7, line 14) classified in class 709/224.
- II. Claims 18-24, drawn to a process for maintaining a shared physical connection to a remote resource despite receiving a disconnection request from one or more processes located on a client computer, classified in class 709/227.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable.

In the instant case, subcombination I and subcombination II do not overlap in scope. Here, subcombination I is directed to maintaining a shared physical connection,

Art Unit: 2453

in response to server-side conditions (i.e. receiving a disconnection request from a remote resource), whereas subcombination II is directed to maintaining a shared physical condition in response to client-side conditions (i.e. receiving a disconnection request from one or more processes located on a client computer).

Furthermore, subclass I and subclass II are not obvious variants of each other. Maintaining a physical connection to a remote resource, despite receiving a disconnection request from said remote resource is not an obvious variant of maintaining a shared physical connection despite receiving disconnection request from one or more processes located on a client computer.

Finally, subclass I is separately usable from subclass II. Here, subclass I may be used as a process for monitoring server-side conditions, such a disconnection request from a remote resource, whereas subclass II may be used in a process to monitor client-side conditions, such as disconnection requests from one or more client-side processes.

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to

Art Unit: 2453

provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election to one of the inventions I-II to be examined even though the requirement be traversed.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).

A shortened statutory period for response to this action is set to expire 0 (zero) months and 30 (thirty) days from the mail date of this letter. Failure to respond within the period for response will result in ABANDONMENT of the application (see 35 U.S.C 133, M.P.E.P 710.02, 710.02(b)).
